

## Distributed Systems Part 2 Bonus

### Your Grade

Your grade for this course is determined by the points you earn during the semester as well as during the exam. There are 3 point sources:

- Part 1&2 written exam [90 + 90 points]
- Part 1 Android project [45 points]
- Part 2 bonus [20 points]

The total number of points achievable is  $90 + 90 + 45 + 20 = 245$ .

### Part 2 Bonus

Your task is to create an original exam question including a (correct) solution for one of the topics covered in the part 2 of the lecture. We might use your question as inspiration in the actual exam. Please follow the following guidelines:

- The submission deadline is Tuesday, December 6th.
- It should be a non-trivial question, i.e., not a pure knowledge question.
- Both the question and the solution should be as precise as possible.
- You must come up with your own idea. Don't try to cheat – we know our exercise sheets and old exams, and we check material which obviously comes from third-party sources (other books, Wikipedia, ...). Minimal variations of such copied questions are not acceptable either.
- Your submission should be in PDF format.
- Send your exam question to [Michael König](#). Please use “[DistSys Bonus] lastname firstname” as subject line. Please name your file `lastname_firstname.pdf`.
- If you are repeating this course and have received a bonus last year, then let us know. In this case, you can keep your bonus.

A good submission will earn you 10 points. The very best submissions will be awarded with 20 points. You will not receive feedback before December 6th. Instead, we will inform you a few days after December 6th whether you got the bonus points. If only minor changes are needed, we will give you a brief time period to make those changes.
